EXPERIENCE

IEEE NIT Silchar - Student Summer Intern

AI & Cybersecurity Intern

- Researched ML-driven cybersecurity solutions for Internet of Vehicles (IoV) systems using Generative AI for anomaly detection and predictive threat analysis. Contributed to real-world AI security workflows, strengthening knowledge in scalable AI deployment and intelligent threat modeling.

Unimity Solutions

Frontend Developer Intern

- Developed responsive React.js interfaces improving usability and performance across multiple web application modules. Enhanced scalability through component-based architecture and modern frontend engineering practices.

CodeBind Technologies

Web Development Intern

- Built and deployed dynamic web applications using HTML, CSS, PHP, and MySQL with backend integration support. Delivered production-ready features while strengthening full-stack development, debugging, and deployment workflows.

PROJECTS

Wayvo AI – AI-Powered Smart Travel Assistant for Tamil Nadu | [Live Demo](#)

- Built an intelligent AI-powered travel planning platform featuring route optimization, transport comparison, weather integration, and smart travel assistance for Tamil Nadu tourism and local transport systems.
- Integrated LLM-based assistance, API integrations, geo-location and routing systems, AI navigation workflows, and Python-based backend services for real-time travel recommendations and analytics.

Online Evaluation and Automation System (KARE)

- Built an end-to-end institutional evaluation platform automating Faculty, Admin, and Controller-of-Examinations workflows.
- Engineered scalable backend services using Python, Node.js, and MongoDB enabling centralized academic data processing.
- Implemented AI-assisted question paper scanning and automated template generation reducing manual preparation effort.
- Digitized valuation monitoring and evaluation workflows improving transparency and operational efficiency across departments.

RGB–Thermal Image Alignment and Fusion System | [Live Demo](#)

- Developed a multimodal computer vision pipeline aligning RGB and thermal images using feature-based registration in OpenCV.
- Designed preprocessing, synchronization, and fusion workflows enabling enhanced perception for real-world vision applications.

Bitcoin Transaction Anomaly Detection System | [Live Demo](#)

- Built an ML-based fraud detection system identifying anomalous cryptocurrency transactions using Isolation Forest and XGBoost.
- Performed feature engineering, behavioral analysis, and model evaluation to detect suspicious financial patterns.

Stress Monitoring Cap — IoT Wearable with Deep Learning Analytics | [Documentation](#)

- Designed an IoT wearable system collecting physiological signals for real-time stress monitoring.
- Built an LSTM deep learning model predicting stress patterns from continuous sensor time-series data.

EDUCATION

Kalasalingam Academy of Research and Education

B.E Computer Science Engineering — CGPA: 8.52

2022 – 2026
Tamil Nadu, India

INTI International University

International Exchange Semester — GPA: 3.30

2025
Malaysia

SKILLS

Programming: Python, SQL, JavaScript

Machine Learning & AI: Supervised & Unsupervised Learning, Deep Learning, NLP, Computer Vision, Generative AI, Anomaly Detection, Time-Series Modeling

Deep Learning & Frameworks: PyTorch, TensorFlow, Scikit-learn, OpenCV

LLM & AI Systems: LLM Applications, RAG Pipelines, Prompt Engineering, Model Evaluation, Model Deployment, API Integration

Backend & AI Deployment: FastAPI, Flask, REST APIs, Streamlit, Docker (Basic)

Data & Databases: MongoDB, MySQL, Data Preprocessing, Feature Engineering

Tools: Git, GitHub, Linux, OpenAI API, Gemini API

Currently Exploring: LangChain, Vector Databases, MLOps

ACHIEVEMENTS & LEADERSHIP

Oracle Cloud Infrastructure 2023 AI Foundations Associate | Complete Neural Networks Bootcamp — Udemy | IEEE RAS Project Showcase 2nd Prize | Brilliant Bharath Hackathon 2026 2nd Place | Conducted Frontend Workshop (50+ Participants) | ACM Outreach Mentor Guided 100+ Government School Students
